GROUP ASSIGNMENT: DATA MANAGEMENT FOR HRIS

v. Entry Procedure and Process

MEMBERS:

ALI HASSAN ALI	BITAM/11/23/042/TZ
OTHMAN KHAMIS JECHA	BITAM/11/23/092/TZ
ISSA HARUB SHAAME	BITAM/11/23/094/TZ

DATA MANAGEMENT FOR HRIS

Entry Procedure and Process

Entry procedure and process in a Human Resource Information System (HRIS) refers to the steps followed when collecting, entering, verifying, storing, and updating employee information in the system.

1. Data Collection:

Employee information such as personal details, qualifications, attendance records, and payroll data are gathered from authorized sources.

2. Data Verification:

The collected information checked for accuracy, completeness, and consistency before entered into the HRIS.

3. Data Entry:

Authorized HR personnel enter the verified information into the system using standardized forms and procedures.

4. Validation and Approval:

The system validates the entered data, while supervisors or managers approve critical records to reduce errors.

5. Data Storage:

The approved information is securely stored in the HRIS database for future use and retrieval.

6. Updating and Maintenance:

Employee records are regularly updated to reflect changes such as promotions, transfers, salary adjustments, or new qualifications.

7. Security and Access Control:

Access to data is restricted to authorized users to ensure confidentiality, integrity, and protection of employee information.

Conclusion:

A well-defined entry procedure and process ensures that HRIS data remains accurate, reliable, secure, and useful for decision-making within an organization.
